How to use LOAD DATA

How do I use the LOAD DATA command as described [here](#).

I have the following LOAD DATA statement:

```
LOAD DATA FROM FILE 'E://Temp/Values.txt'  
  
into PARIS.UAGUMNDOOUT1 (AHSUID, AHSUUAGID)
```

Where do I run it? It doesn't work in the SQL Gateway, in the terminal, in an embedded SQL command.

What am I missing?
