InterSystems Developer Community in French

Hey Developers,

Now it's time for all French-speaking users of our community!

We're super excited to announce the official start of the [InterSystems Developer Community in French](#)!

Let me introduce you [@Guillaume Rongier](#), [@Robert Bira](#) and [@Irène Mykhailova](#) as managers of the French Community.

Here are the main points you need to know:

You can switch between sites using the language menu in the top right corner:

If you know French, it's great that you can contribute articles, make discussions, ask and answer questions about InterSystems Data Platforms now in French too!

Also!

You can use Language Switcher – the option to switch to the French version of the article.

The screenshot shows the top navigation bar of the InterSystems Developer Community website. The 'Community' tab is selected. Below the navigation bar, the 'Language Switcher' menu is open, showing options for Spanish, Portuguese, Japanese, Chinese, and French. The 'French' option is highlighted with a red arrow. The main content area displays a post by Olga Zavrazhnova titled 'Announcements at Hacking Health Camp in France this year!'. The post text mentions that InterSystems will be a Platinum sponsor of the Hacking Health Camp, a big professional conference and hackathon, which will take place in-person in Strasbourg, France on March 25-27, 2022. It also mentions a webinar on March 8, 2022, titled 'How FHIR can help you develop your health applications' (Webinar language: French). The post includes a link to the official website and a button to 'Add to calendar'.

Also!

If you published a post in English or any other language, it could be translated by anyone in French and will be helpful for even more people!

Everyone is able now to add or request a translation to any post on the Developer Community. After selecting any language using the Language Switcher, any user can add a link to the translation of the post or request its translation.

The screenshot shows the 'Language Switcher' menu with 'French' selected. Below the menu, there are two sections: 'Make translation' and 'Request translation'. The 'Make translation' section explains that if you would like to translate this post yourself, you should click the 'Translate' button. A new post will be automatically created in the community of the language you selected. All tags will be pulled up automatically. The 'Request translation' section explains that if you would like this post to be translated by InterSystems Developer Community, you should submit your request by clicking the 'Request' button. You will be notified about the published translation of the post. At the bottom, there is a link to 'Go to the original post "InterSystems Globals Contest Kick-off Webinar"'. The 'Translate' and 'Request' buttons are highlighted with red boxes.

The same thing works for the French Community site – you can translate the French article into English or any other language. Be sure, you know both languages well!

Please feel free to provide any feedback on how to make our French Community better.

Welcome to the [InterSystems Developer Community in French](#)!

Let's discuss the topics that you'd like to see and discuss on the FR DC. Take the poll below

Or feel free to share your suggestions in comments!
