load and compile from java

Hi i am trying to load and compile one class from java . I am following this code. I am using iris 2021.2

```
irisConnection = (IRISConnection) DriverManager
.getConnection("jdbc:IRIS://10.20.30.40:51773/MYNAMESPACE", "username", "password");
iris = IRIS.createIRIS(irisConnection);
iris.classMethodStatusCode("%SYSTEM.OBJ", "Load",
"/filePath/SumanPramodTest.test3.CLS.xml", "/displaylog=0 /displayerror=0");
```

When i am passing cuk or ck in qspec param , i am getting error . but when i pass "/displaylog=0 /displayerror=0" it does not throw an error but does not compile the class too.

Any leads would be of great help .
