How to write an ObjectScript Task to export Audit log to a directory and under which namespace?

Hi All,

Can you please guide me on how to programmatically write objectscript task to export audit log to a directory and what type of task should I set it to.

I want to achieve the same behaviour on the code as seen below

System > Security Management > Export Audit Log

Export Audit Log

To export items from the audit log, fill out the following form and press [OK]:

What would you like to do?

☐ Export all items

☒ Export all items older than this many days:

Export to file:

[#ObjectScript](#) [#HealthShare](#)

Product version: IRIS 2020.2

\$ZV: HealthShare 2020.2 [HealthShare Modules: Active Analytics:20.0.8620 + Core:20.0.8620 + Patient Index:20.0.8620] - IRIS for UNIX (Red Hat Enterprise Linux for x86-64) 2020.1 (Build 217120418U) Tue Nov 17 2020 15:48:44 EST
