InterSystems Language Server version 2.0.0

InterSystems is pleased to announce version 2.0.0 of the Language Server for VS Code. The Language Server augments the [VS Code ObjectScript extension](#) to provide better syntax coloring, embedded documentation, code completion and more. Detailed information is available in the [GitHub repo's README](#). Version 2.0.0 adds support for a number of new platform architectures including M1 Macs! It also reduces package size, improves SQL coloring, and fixes a number of other issues detailed in the [CHANGELOG](#).

As always, if you already have the extension installed, VS Code should automatically update your extension when you restart or reload. If you're a new user, [use these instructions](#) to get started.

[#Apple macOS](#) [#Languages](#) [#ObjectScript](#) [#VSCode](#)
