How can I tell when a business service has finished reading a file

Hello Community,

I am still pretty new to Ensemble, Caché, or ObjectScript. My question is this how can I tell when a file was finished and read fully? Currently, I have an EnsLib.FilePassthroughService reads a file from a designated file path and moves it to an archive file path. I need to set up an alert or a notification that can tell me once the file has been read in its entirety and has been moved out of its current file path.

Any help you can give me would be greatly appreciated, or if you need further clarification I can do my best to answer any question you have. Thank you.
