Stop server side code when <form onSubmit> method finds errors

The documentation suggests this method for calling server side methods via SUBMIT: https://docs.intersystems.com/latest/csp/docbook/DocBook.UI.Page.cls?KEY...

Following that, the form I'm submitting needs to validate the dates entered (the startDate isn't past the endDate).

Trying to keep everything in the .CSP file, I add a tag:

<script language="Cache" method="Validate" arguments="startDate:%Date,endDate:%Date">

I'm able to validate the dates here, but not matter what I do (quit, return false, redirect) the code that runs on the SUBMIT goes:

<script language="Cache" runat="server">

Essentially, how can I stop the runat="server" script from going when I find an error onSubmit from the form?

#CSP #Caché
