Senior Programmer Analyst - University of Saskatchewan

The University of Saskatchewan has some of the most innovative people doing groundbreaking research and pedagogy. Information and Communications Technology (ICT), as strategic partners, enable courageous curiosity by empowering students, staff and faculty to do more than thought possible with technology that boosts productivity, strengthens security, enhances research outcomes, amplifies connectivity and supports increased pedagogical capability.

Primary Purpose The role of the Senior Programmer is to lead the analysis, development, and support of software applications and integrations to meet the business and technical needs of the Western College of Veterinary Medicine (WCVM) and the 24/7 Veterinary Medical Centre's Hospital Information System (VETNET). Reporting to the College IT Manager, this role would be the lead resource regarding the support and uptime of the VETNET system and ultimately the programing team has the responsibility of its operations. The Senior Programmer would also provide guidance and direction as we plan future development and support objectives.
