@sql in cache object script , sql explorer resulting different results

Hi Community,

I have below embedded sql query in object script class

```
&sql(SELECT count(ID) into :suspendedCount FROM Ens.MessageHeader where TargetQueueName not like 'S%' and TargetQueueName not like 'ENS%' and Status='5')  
resulting 1095 into suspendedCount
```

but same query executed in SQL explorer

```
SELECT count(ID) FROM Ens.MessageHeader where TargetQueueName not like 'S%' and TargetQueueName not like 'ENS%' and Status='5'
```

resulting 0

but once i changed where condition `Status='5'` to `Status='Suspended'`

```
SELECT count(ID) FROM Ens.MessageHeader where TargetQueueName not like 'S%' and TargetQueueName not like 'ENS%' and Status='Suspended'
```

resulting 1095

same embedded sql query in object script class

```
&sql(SELECT count(ID) into :suspendedCount FROM Ens.MessageHeader where TargetQueueName not like 'S%' and TargetQueueName not like 'ENS%' and Status='Suspended' )  
resulting 0 into suspendedCount
```

What is went wrong?
