Save attached file to disk from Email

Hello

We have a solution with an `EnsLib.Email.InboundAdapter` as services that scan a mailbox on incoming mail with attachments.

When a new email arrives, the service sends the request (with a property `%Net.MailMessage`) to the process. In the process, we try to loop through and retrieve part 2 which we assume is the file.

```
set Part = pRequest.Mail.Parts.GetAt (2)
```

We can read out the file name:

```
Set FileName = Part.FileName
```

But how, and is it possible, to save the attached file to disk drive?

I do not see any method that supports that in that class.

Or must we use `%Net.POP3` to receive and store the file?

Grateful for answers.

Regards Michael
