## Running Cache on LocalHost

Hi,

I am not able to connect to the local web browser.

If I try to open documentation (<http://localhost:57772/csp/sys/UtilHome.csp>) I get

Caché Server Pages Version 2018.1.6.717.0

Server Availability Error

Server is currently unavailable

If I call up the log CSP.log I have the following:

Access Denied

Diagnostic

Failed to connect to 'LOCAL' - Reason: 0 (Connection successfully made but server not responding) (No Retry)

I cannot figure this out

[#Cache](#)

Product version: Caché 2018.1
