## \$System.Util.DecimalToHex

Hi,

Doc: classMethode DecimalToHex(decimal As [%String](#)) as [%String](#)  
Converts a decimal string to a hexadecimal string.

w !,\$System.Util.DecimalToHex(42) > 2A

w !,\$zhex(42) > 2A

w !,\$System.Util.DecimalToHex(0) is empty

w !,\$System.Util.DecimalToHex("0") is empty

w !,\$System.Util.DecimalToHex("00") is empty

w !,\$zhex(0) > 0

Is the empty string really the intended output?

Best regards

RY
