Delete item in production

Hello community!

I'm creating a script to remove an item (component) from the Ensemble production, I know there is a manual way to do it but as there are several components the idea is to use a script to be faster.

I tried using %Delete() and doing a select on Ens.Config.Item, but this ends up generating several errors in production. Does anyone have any idea how I can do this simply?

[#System Administration](#) [#Ensemble](#)

Product version: Ensemble 2018.1
