HTTP request using a curl

Hi guys,

How do I create a make a http request using curl, I've found samples on how to do it from a command prompt but how to create and make a http post request and get a response with ensemble object and functions?

I guess something like :

```
s req=##class(%Net.httpRequest).%New()
```

```
...etc
```

Or do I build a command run it in ensemble and get a response back, if so how can I do that ?

Thanks
