Set File = ##class(%File).%New(FilePath)
Do File.Open("R")
Set Httprequest=##class(%Net.HttpRequest).%New()
Set Httprequest.SSLConfiguration="RTLS"
Set Httprequest.Server="vibra-api-dev.azurewebsites.net"
Set Httprequest.Timeout=30
Set Httprequest.Https=1
set Httprequest.ContentType="application/json"
Do Httprequest.SetHeader("Accept","*/*")
Do Httprequest.SetHeader("Authorization","Bearer ^Token)
While ('File.AtEnd) {
    s Line=Line_File.Read(1000)_$char(10)
}
do Httprequest.EntityBody.Write(Line)
Set tSc=Httprequest.Post("/api/sensors/vibration")
Set StatusCode=Httprequest.HttpResponse.StatusCode
Set State=Httprequest.HttpResponse.StatusLine
Quit StatusCode_"|"_State
