Connecting two ensemble instances

Hi Guys,

We currently running all our clients in Ensemble 2014, but now we are having a problem that 2014 can't resolve (TLS version is 1 where we need TLS 1.2 or higher).

basically, all we're looking for is a classmethod in Ensemble 2018 that uses HTTP request to connect to a client server and get tokens & some JSON files and then save them in a class available in our current 2014 production server.

Or maybe using SQL Gateway Connections to either call this classmethod from 2018 Ensembe in our 2014 Ensemble or get the classmethod to same in a table located in 2014 Ensemble either way, but I'm not sure how to do it?

Buy the way both instances are running in the server

thanks
