# onnection to a remote database

Hello! Need help...
Please tell a newbie how to connect to a remote database.
OS Centos 7, WebServer type Apache, version cache - cache-2014.1.5.851.1-lnxrhx64,
license:
[ConfigFile]
FileType=License 5.1

[License]
LicenseCapacity=Cache 5.0 Entree - Concurrent Users for Intel (Linux):40, Multi-Server
CustomerName=...
OrderNumber=2010...
ExpirationDate=4/26/2036
AuthorizationKey=...
MachineID=

Tried to connect to a remote database through the ECP server. Writes that - The Cache license does not support ECP. I understand that there must be another cache.key for ECP? Then how to connect two servers for data exchange????

thanks..

#Caché
Product version: Caché 2014.1
