PowerBI and IRIS generating "The column '...' of the table wasn't found."

Hi,

I have 3 simple tables: Encounter, Patient and Immunizations. Encounter makes a reference to Patient, and Patient contains a list of Immunization objects.

I've tried using PowerBI to access IRIS (using ODBC connector, not InterSystems BI connector), PowerBI reports the error:

Expression.Error: The column 'Patient' of the table wasn't found.

Details:

Patient

it does this for two of the three tables I need only (Patient and Encounter), but not for Immunization IRIS table..

Anyone know why and how to fix ?

Thanks - Steve
