Installation IRIS on UbuntuLTS 22.04

Hi All,

I am trying to install IRIS Health CE on a Ubuntu VM, so I can test IAM with it.

During the installation I get the following error:

=================

Warning: The installer can't find a platform in this distribution
supported by your system.

Searching for platforms that might install in unsupported mode...

 1) Ubuntu LTS (x64)

Enter the number for your system: 1

Your system type is 'Ubuntu LTS (x64)'.
openssl version 1.1.1 is required.

** Installation aborted **

No packages will be installed.

====================

I installed OpenSSL 1.1.1n 15 Mar 2022. It was version 3.0.0.

Thanks for your help!

Chi Wan
