## Join the Package Manager discussion

InterSystems and the developer community around [ZPM](#) have been working together to take ZPM to the next level, building it into IRIS and making it a tool that can not only manage 3rd-party code, but key parts of InterSystems' products. You can hear a lot more on this topic at [Global Summit 2022,](#) and attend an experience lab to get hands-on.

As a developer, you can also join the [ongoing discussion](#) about some final key design issues we are exploring with the community. Whether you are highly technical or not, please join the conversation on GitHub and let us know how you envision using a package manager to deliver your solutions, or as an end-user, to manage your DevOps workflows.
