Using %request.Data in production

I am trying to pass %request.Data from my rest dispatch class to a production so that I can use it in by business operation. I have created a message that has a property:

```
Property urlParameters As %String [multidimensional];
```

to get the data to the production. I am new to intersystems and multidimensional arrays/globals

dispatch class:

```
Kill parameters  
Merge parameters = %request.Data  
Set genericRequest = ##class(Core.API.V1.Msg.GenericRequest).%New()  
Set genericRequest.urlParameters = parameters
```

business operation:

Access data from the multidimensional array that is being passed in the property genericRequest.urlParameters.

Any suggestions are greatly appreciated.

Thanks

Dan
