Global Looping

I have read \$Query and \$Order but still not getting the code that i am looking to work correctly.

I have a global like

```
^TestGlobal("Not Configured","Value 1")=""
```

```
^TestGlobal("Not Configured","Value 2")=""
```

I am trying to loop through and get output of all values in csp page by script.

How in a loop does this work.

I tried the for loop only getting value 1 not both the values

```
Set node = $Query(^TestGlobal("NotConfigured"))
WRITE !,node
FOR {
  SET queryary=$QUERY(node)
  QUIT:queryary=""
  WRITE !,queryary
}
```
