## Is there a way to use IRIS from command line (eg: batch file), the same way as it can be done in CACHE ?

We recently migrated to IRIS. Before, the CACHE.EXE executable could be invoked from a batch file directly :

```
C:\InterSystems\Cache\bin\cache.exe -s C:\InterSystems\Cache\mgr -U %SYS
```

This will display the following in console :

```
Node: DESKTOP-8H4B321, Instance: CACHE
```

```
USER>
```

Additionally, the pipe instruction can be used to redirect some commands directly

```
echo write 50 | C:\InterSystems\Cache\bin\cache.exe -s C:\InterSystems\Cache\mgr -U %SYS
```

I am looking for the same thing in IRIS. If I do the same command line with IRIS executable, I got an error :

```
Invalid argument to IRIS : -s
```

I have looked into documentation and the following can be used but it's not the equivalent :

```
IRIS.exe run IRIS  
IRIS.exe console IRIS  
IRIS.exe terminal IRIS
```

EDIT : I found a similar question [here](#)

[#InterSystems IRIS](#)

Product version: IRIS 2022.1
