Errors installing OpenExchange git-source-control using ZPM

Hi,

I have tried to install the module git-source-control into my USER namespace, but get the following error.

ERROR! ObjectScript error: SQL error(s) have occurred during the running of the 'statsINFO()' method. Invoke the following method for additional details: set errID=##class(%SYS.PTools.Stats).getPToolsError(...) WHERE errRowID={2763¦2764}>
  > ERROR #6084: Unknown errors detected, but no error code reported

This module works from other namespaces. I decided to re-install the latest published version of ZPM, and tried to install git-source-control class again and get this now:

ERROR! ObjectScript error: <CLASS DOES NOT EXIST>%GetClass+5^%ZPM.PackageManager.Developer.Extension.SourceControl.Interface.1 *SourceControl.GitExtension
  > ERROR #6315: Errors reporting importing XML subelement in file 'C:\InterSystems\IRIS\mgr\modules\USER\git-source-control\2.0.1\module.xml' at line '3' offset '43', skipping this item.

As git-source-control is still working from other namespaces, I do not know what is messed up here. From the last message, there seems to be some inconsistencies between this module and the required version of ZPM.

How do I recover ?

Also - I'm assuming ZPM is backward compatible and can be updated at anytime, without effecting existing installed modules, or previously published modules..

 Thanks - Steve
