Default Database Resource

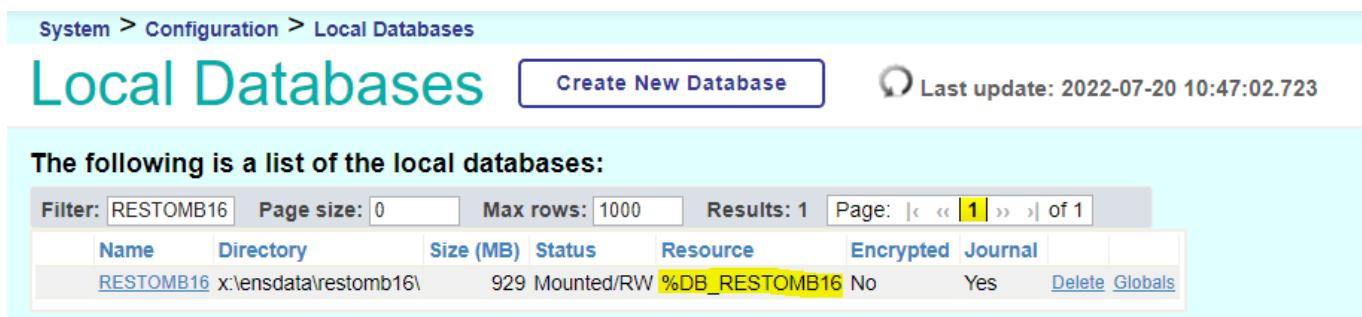

Can I please check if anyone know why the data base resource is created differently when creating a namespace after specifically selecting it to use the default resource %DB_%DEFAULT?

I created a namespace and when creating the DB I selected the option to use the default resource

The screenshot shows the 'Database Wizard' interface for creating a new database. The top navigation bar includes 'Server BH2VMTIC01', 'System > Configuration > Namespaces', and 'User mary Namespace %SYS'. The main title is 'DATABASE WIZARD'. A sub-instruction says 'Database resources control access to the contents of InterSystems IRIS databases.' Below this, a question asks 'What is the Database Resource for This Database?'. Three radio button options are shown: 'Use the default resource, %DB_%DEFAULT' (selected), 'Use an existing resource', and 'Create a new resource'. A dropdown menu labeled 'Database Resource' contains '%DB_%DEFAULT'. On the left sidebar, there are several options: 'New Name' (selected), 'Use the form below to', 'The default database for G...', 'Select an ex...', 'The default database for Ro...', 'Select an ex...', and 'Create a default Web ap...'. The bottom of the sidebar has a note: 'The default database for G... Select an ex... The default database for Ro... Select an ex... Create a default Web ap...'.

When the namespace creation was complete , database is using a new resource instead of the default.

The screenshot shows the 'Local Databases' page. The top navigation bar includes 'System > Configuration > Local Databases'. A 'Create New Database' button is visible. The page title is 'Local Databases' with a 'Last update: 2022-07-20 10:47:02.723' timestamp. Below the title, a message says 'The following is a list of the local databases:'. A table lists one database entry:

Name	Directory	Size (MB)	Status	Resource	Encrypted	Journal
RESTOMB16	x:\lensdata\restomb16\	929	Mounted/RW	%DB_RESTOMB16	No	Yes

Below the table, there are links for 'Delete' and 'Globals'.
