Installing IRISHealthCommunity-2022.1.0.209.0-Inxubuntu2004x64 on Ubuntu 20.04 LTS on oracle virtual box

Good morning. Perhaps someone can tell me if this IRIS health communit version (IRISHealthCommunity-2022.1.0.209.0-Inxubuntu2004x64) is supposed

to work in an Ubuntu 20.04 LTS installation in an Oracle Virtual Box .

I am trying to install different versions on Ubuntu . I tried with the 18 version. No luck. Than I've tried with the 20.04 version. No luck either.

The error I am having now is below

////////// error message from the install //////////

[home/epic/epicinstall/IRISHealthCommunity-2022.1.0.209.0-Inxubuntu2004x64# ./irisinstall](#)

Warning: The installer can't find a platform in this distribution supported by your system.

Searching for platforms that might install in unsupported mode...

1) Ubuntu LTS (x64)

Enter the number for your system: 1

Your system type is 'Ubuntu LTS (x64)'.

openssl version 1.1.1 is required.

** Installation aborted **

No packages will be installed.

////////// my comments now //////////

But there is an openssl version installed on the box.

Version 3 is installed

////////// output from command `openssl version -a` //////////

////////// my comments //////////

Well, than I tried to install the version openssl 1.1.1 in this Ubuntu 20.04 but I am having compilations errors .

But before I proceed on the debug I thought I could ask if this IRIS community version is supposed to work in a virtual environment , like Oracle Virtual Box.

Maybe I am just wasting my time....

Thank you very much for any input someone may send me.

Appreciate very much.

Jeff Borges
