Recap Video from MIT Hacking Medicine GrandHack

Hi Community,

In April 2022 InterSystems participated as a Gold Sponsor in [MIT Hacking Medicine GrandHack](#) – MIT's annual flagship hackathon introducing healthcare challenges to be solved by engineers, clinicians, designers, developers, and business people. This year we introduced the "Best Use of InterSystems FHIR Services" challenge (read more [here](#)) and awarded prizes to the three winning teams.

Sharing this [recap video from MIT Hacking Medicine GrandHack](#) so you could also catch the vibe of the event!

Winners of our challenge:

1st Place: **PrivyCare** - a mobile health platform that addresses hospital readmissions for people with chronic illness. The health IT solution uses AI with natural language processing to analyze the patient response and recommend next steps. This eliminates unnecessary trips to the ED. PrivyCare also uses FHIR to integrate with the EHR and analyzes lab results to conduct patient monitoring and track trends.
2nd Place: **Careciege**
3rd Place: **QRX**

More hackathons coming soon! Would you like to take part as a mentor? Drop us a line!
