Check out InterSystems Ideas - Our Official Feedback Portal

Hey Community!

We've always had this idea on the back burner about improving the process of collecting, analyzing, and responding to product enhancement requests from our members. We knew we needed a good user experience and even better internal processes to make sure the best ideas were gathered, heard, and responded to. And finally, this thought has come to fruition!

So in case you missed it, let me introduce to you the Official InterSystems feedback portal:

[>> InterSystems Ideas <<](#)

[InterSystems Ideas](#) is a new and improved method for you to submit product enhancement requests and ideas related to our services (Documentation, Dev Community, Global Masters, etc.), see what others have submitted, vote on your favorite ones, and get feedback from InterSystems.

We are starting active development and promotion of both the Ideas portal and your ideas. We wish for you to have a public way to get feedback from our product managers and members of the Community.

The ideas with the most votes will be sent to the Product Management Department for review.

Share your ideas with the community, and contribute by voting and commenting on other ideas – the more votes the more influence!

See you on the [InterSystems Ideas portal](#)!
