# Can run application in IE

Hi Guys,

My application is running in Chrome but not in IE and I'm guessing it's a security issue, where when I open IE it tells me that ESC is on, but checking the configure in Server Manager tells otherwise?

The screenshot shows two windows. The top window is Internet Explorer with the address bar showing 'res://resetup.dll/HardAdmin.htm'. A red box highlights the message: 'Internet Explorer Enhanced Security Configuration is enabled'. Below this, text explains that IE ESC is currently enabled on the server and provides links for more information. The bottom window is the Windows Server Manager 'Local Server' properties page for 'EC2AMAZ-P16L6KT'. It shows various system settings like Windows Firewall, Remote management, and Windows Defender. A dialog box titled 'Internet Explorer Enhanced Security Configuration' is overlaid on the Server Manager window, showing the configuration for Administrators and Users, both set to 'Off'.

**Internet Explorer Enhanced Security Configuration is enabled**  
Internet Explorer Enhanced Security Configuration is currently enabled on your server. This configures a number of security settings that define how users browse Internet and intranet Web sites. The configuration also reduces the exposure of your server to Web sites that might pose a security risk. For a complete list of the security settings in this configuration, see [Effects of Internet Explorer Enhanced Security Configuration](#).  
This enhanced level of security can prevent Web sites from displaying correctly in Internet Explorer and restrict access to network resources, such as files on Universal Naming Convention (UNC) shares. If you want to browse a Web site that requires Internet Explorer functionality that has been disabled, you can add the Web site to the inclusion lists in the Local intranet or Trusted sites zones. For more information, see [Managing Internet Explorer Enhanced Security Configuration](#).

**Internet Explorer Enhanced Security Configuration**  
Internet Explorer Enhanced Security Configuration (IE ESC) reduces the exposure of your server to potential attacks from Web-based content.  
Internet Explorer Enhanced Security Configuration is enabled by default for Administrators and Users groups.

**Administrators:**  
☒ On (Recommended)  
☐ Off

**Users:**  
☒ On (Recommended)  
☐ Off
