SAM - Adding nodeexporter

Note sure if anyone would know this.... But I presented my team with a Proof of Concept of running SAM to monitor our IRIS Development and Test Clusters. In talking with them we would like additional OS metrics that aren't provided by what is built into SAM. Looking at more OS detail I found nodeexporter from Promethus. I added nodeexporter to our server that we want to monitor, but then tried to config iscprometheus.yml to use nodeexporter. That did not go well and when I restarted SAM, it would not download the built in metrics to SAM. Is it possible to use SAM and nodeexporter to monitor the same instance?
