## Missing Ensemble Classes in IRIS for Health Community Docker

Hello,

I'm using CircleCI to spin up the image `store/intersystems/irishealth-community:2021.2.0.649.0`.

When building the application we are getting messages that say:

```
ERROR #5373: Class 'EnsLib.HL7.Message', used by 'Package.Class', does not exist  
Skip class Package.Class
```

Other missing classes seem to include, but not limited to:

```
Ens.BusinessProcessBPL  
Ens.BusinessService  
EnsLib.RecordMap.ComplexChild  
EnsLib.EDI.XML.Document  
Ens.Request
```

Binding to a port and looking the management portal, it seems we have the namespace HSLIB and some classes:

localhost:9092/csp/sys/exp/%25CSP.UI.Portal.GlobalList.zen?\$NAMESPACE=HSLIB&\$NAMESPACE=HSLIB

As far as we understand, these classes should be available on the community edition. Is there possibly a setting or some setup we are missing in the build that these classes aren't generated?

Any help is appreciated!
