## Docker Container with different NLS Locale Definition (like DEUW)

Hi,

I have a problem when starting the docker container that the collation is standard US

sample:

```
docker run --name iris1 -d --publish 1972:1972 --publish 52773:52773  
containers.intersystems.com/intersystems/iris-community:2022.1.0.209.0 --check-caps false
```

After the installation I like to import existing classes and globals but it failed due to an collation error

We usually use DEUW = German3

if I change it manually - in the management portal / NLS... - to DEUW it works fine. (By the way.... the managemet portal shows all in German due to the Linux version)

Question: is there a way to predefine/automate the NLS Local on installation?

[#Docker](#) [#InterSystems IRIS](#)

Product version: IRIS 2022.1
