[Code Challenge] Are they opposite?

Hello, community

To celebrate that this week is "International Week of Deaf People 2022" , <https://wfdeaf.org/iwdeaf2022/>

Could we do a small challenge?

The statement is:

Task

Give you two strings: s1 and s2. If they are opposite, return true; otherwise, return false. Note: The result should be a boolean value, instead of a string.

The opposite means: All letters of the two strings are the same, but the case is opposite. you can assume that the string only contains letters or it's a empty string. Also take note of the edge case - if both strings are empty then you should return false/False.

Examples (input -> output)

```
"ab", "AB"      -> true
"aB", "Ab"      -> true
"aBcd", "AbCD"  -> true
"AB", "Ab"      -> false
" ", " "        -> false
```

This programming exercise has been taken from:

<https://www.codewars.com/kata/574b1916a3ebd6e4fa0012e7>

We hope you enjoy this challenge

Thanks for your time
