How to clean compile imported cls files in Studio.

Hi Friends ,

Here I have imported object script cls classes form local file to studio , As a result new package created and all the cls files showing inside the package.

Now When I comple newly imported classes , it is thows compilation error because , each cls is already compiled in source system.

If i removed Storage Default tag from cls , then compile it , it is working fine by regenerating Storage Default tag.

To remove this tag from multiple files is taking long time. I need to remove this Storage Default tag from 500+ files.

Could you please suggest me the alternative like , clean compile option such kind.

Thnaks

Prashanth
