IRIS minimal install but not appearing in system tray

I've installed the latest version of IRIS using Minimal settings as I'm just looking for some basic IDE without connecting to anything.

After install, I see all the files in the Intersystems folder, however there is no "IR" in the system tray. I don't see any executables to launch either. System restart did not populate the system tray either.

Is there any other way to launch Studio?

#InterSystems IRIS
Product version: IRIS 2022.1
