## Linux and links

If I create a link does root use it? (it ' s in profile.d dir)

I'm trying to use a shortcut for a filepath as such: anyone have any thoughts?

PROCAUTO = /JRNSDK/ProcAutoshare

yet in the application it isn't recognizing it.

Here ' s the scenario. (link is in place) that my manager thinks maybe an issue.

login as cacheusr

sudo to root

Then start cache. Since this was started as root through cacheusr would cache know about the link?  
(since it ' s running as root)

[#Red Hat Enterprise Linux \(RHEL\)](#) [#Caché](#)

Product version: Caché 2015.1

\$ZV: 2015.2.3 (Build 855016694)
