## Problems selecting language when installing HealthShare

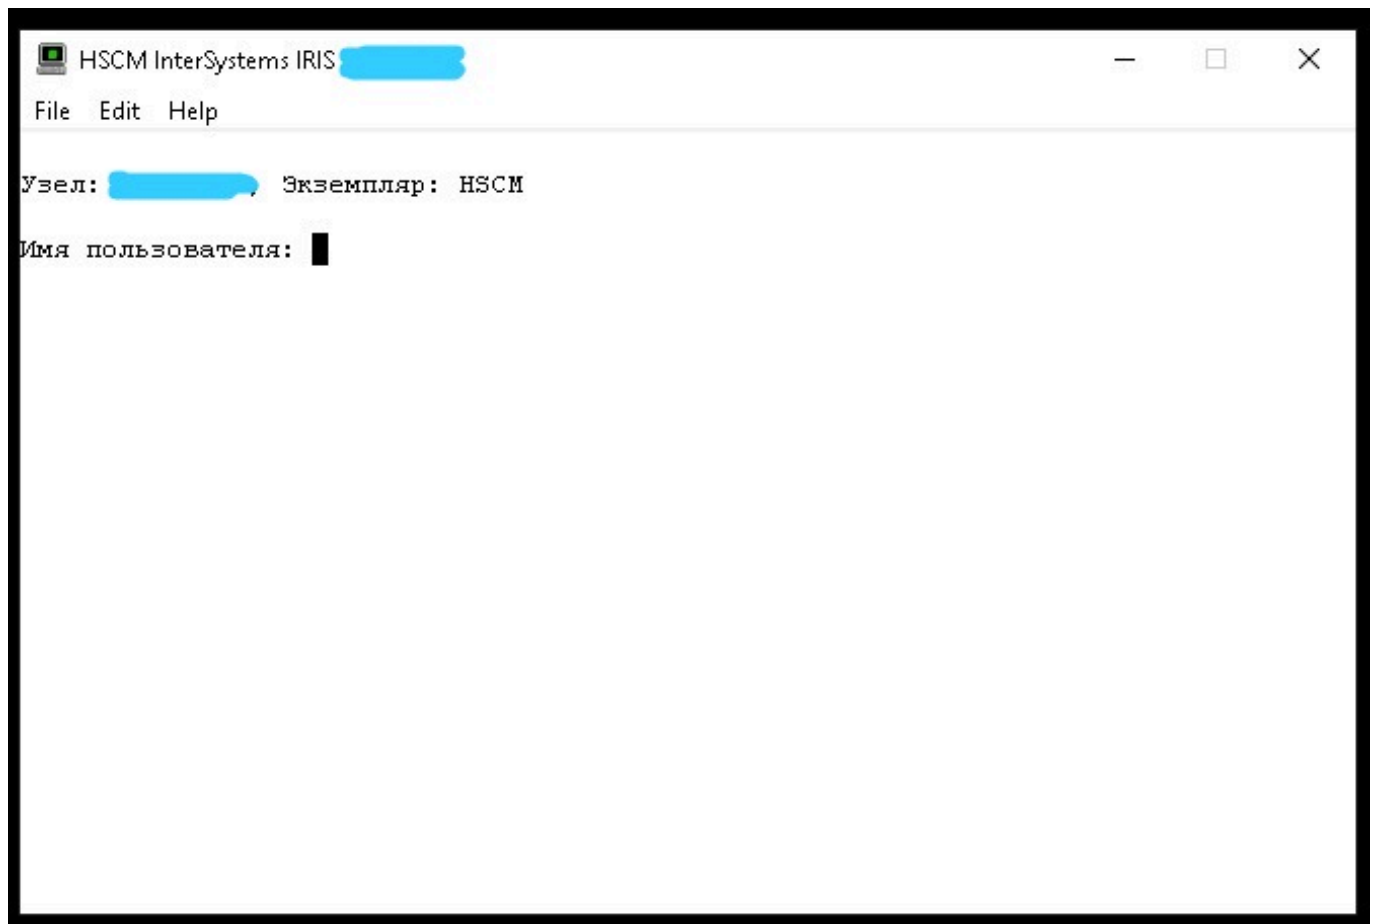

Hello guys,

I'm trying to install HealthShare on a virtual machine. The original language of this virtual machine was Russian, unfortunately I don't speak Russian hehehehe.

So I changed the original language to English, but when I installed HealthShare the portal was in English, but the terminal was in Russian and during installation it doesn't show me any option to select the language.

1. Language configured in the virtual machine.

2. Terminal with russian text.

I tried to convert the system to English, and this worked for the terminal. But it showed me some messages saying that my namespaces now have a problem with Collation Cyrillic1.

## Locale Definitions

Your current locale is: **rusw (Russian, Russia, Unicode)**

Use locale date/time/number formats for **rusw**

Select a locale

enuw

WARNING:

Collation Cyrillic1 not supported in locale enuw  
Collation Cyrillic3 not supported in locale enuw  
Collation Cyrillic4 not supported in locale enuw  
Collation Ukrainian1 not supported in locale enuw  
Database HSCUSTOM uses collation Cyrillic4 not supported in locale enuw  
Database HSSYS uses collation Cyrillic4 not supported in locale enuw  
Database USER uses collation Cyrillic4 not supported in locale enuw

Install locale

enuw

Are you sure you want to make this locale your current locale?

3. Locale definitions

If possible I want to change the Collation configuration for this namespaces, or define english the language install. Someone can help me?

Best Regards,  
Flávio.
