## ZPM Storage on class modified by storage compiler

Hello,

I am getting the following error , and not sure how to get passed this.

We have removed storage on the classes , did a clean compile and still we get the error below on some of the classes

Compile FAILURE

ERROR! Storage on class [ MyClass] modified by storage compiler, developer should have run ^build to make sure all storage is updated correctly and saved to Perforce

Any Idea how to resolve this or what to look for ?

Regards
