## Strings Longer than "Long Strings"...

Hello!

Am after some advice on how to approach an issue I am currently having with one of our interfaces within HealthShare HealthConnect.

We send documents to a third party system via their API.

The API contains a string property, which you use to pass in the document metadata and the Base64 encoded document itself.

Property rsXML As %String;

However, a few times a day we are getting errors as some documents exceed the ' long string ' length within HealthShare for Strings.

Is anyone able to please advise how I should be passing this through? The supplier has confirmed they can take larger documents, so am trying to work out how I pass these through? Am playing around with changing the Request object property to a Stream but not having much joy?
