How to refer to a Classmethod of the same Class using Embedded Python?

Hi folks!

How can I refer to a classmethod of the same class while coding another classmethod with Embedded python?

I know that I can call it with `iris.cls(classname).MethodName()`, but it's more cumbersome even comparing with ObjectScript, where I can call `..MethodName()`.

Compare [ObjectScript](#):

```
do ..SetupGame()
```

and the same call in [EmbeddedPython](#):

```
iris.cls('eshvarov.sample.SeaBattle.GamePython').SetupGame()
```

Thoughts?
