## Using Node js

Hi Guys,

I've the following node js code (see <https://github.com/CassiaNetworks/CassiaSDKGuide/blob/master/nodeexampl...>) that I would like to use in one of my csp pages by including it in my `<script type="text/javascript">` tag but some syntax is not recognized and I'm guessing that node js has some extra libraries doesn't exist in regular Javascript (some examples below), so is there a way to include node js in my page?

```
1  async function processQueue(token) {  
2    var device = connectQ.deq()  
3    while (device) {  
4      var result;  
5      try {  
6        var result = await connect(token, device.mac, device.addrType);  
7        /*  
8         * write 0200 to notification handle to open notification  
9         */  
10       await write(token, device.mac, 17, '0200');  
11     } catch (e) {  
12       result = e;  
13     }  
14     console.log('connect', device.mac, result);  
15     device = connectQ.deq();  
16   }  
17 }
```

```
    // ... something with getMacAddress from ...  
    * so we need filter same device  
    */  
    connectQ.enq({mac:deviceMac,addrType});  
    // connectQ.enq({mac:deviceMac,addrType});  
    });  
    setTimeout(() => {  
        processQueue(token);  
    }, 5000);  
}
```

thanks
