Running ObjectScript classmethod in VSCode Terminal in One Click

Hi Devs!

For me, one of the most painful things about ObjectScript is `##class(Class).Method()` typing to call a class method in code or in a terminal. I even submitted [an idea](#) to simplify it in ObjectScript.

But! There is a new feature in [VSCode ObjectScript](#) that was just introduced to the plugin - Copy Invocation!

Just hover Copy Invocation link above every classmethod in a code, click on it and the invocation is copied to the buffer:

Paste it anywhere you want it to execute!

```
USER>w ##class(dc.sample.ObjectScript).Test()
```

Bazinga!

Here is the [video](#) that shows how it works.

Many thanks to the [VSCode contributors](#)!

Happy coding!
