# Status of IDE's for ObjectScript development

Context: Ensemble development with ObjectScript in a healthcare context - lots of HL7, and some web service stuff. We've used Studio up till now, alongside a lot of leaning on an external developer, but are expanding our team and doing more in-house. We are wondering about Visual Studio Code - not least because it looks easier to hook up to source management solutions. And we've noticed that the test environments that you get connected to when doing many of the online training courses on learning.intersystems.com give you a Visual Studio Code environment. At some point we are likely to shift from Cache 2018 to Iris. Is there a roadmap for the IDEs and which are recommended/supported? What will we lose/miss if we shift from Studio to Visual Studio Code? Can the two be used alongside each other? Do the class templates from Studio exist when creating new classes in Visual Studio Code? Oh, and where does Atelier fit in? Windows environment.

#Ensemble #VSCode
Product version: Caché 2018.1
