Upgrading InterSystems software

Hello community! I'm working on an internal innovation effort at InterSystems considering our documentation/resources around upgrades. As part of this, I'd love to have your answers to any/all of the following questions, either via comment or (if you prefer your answers to be more private) direct message.

Thanks in advance!

What InterSystems products + versions are you running? (\$zv is ideal.)

What makes you decide to upgrade?

What are your blockers to upgrading?

What is your process for evaluating and planning a possible upgrade?

What documentation resources do you use?

What gaps/issues do you see in our existing documentation around upgrades?

What would make your InterSystems software upgrade process better?

What has made an upgrade fail?

When have you had to roll-back?
