Setting a web application password

Hi Guys,

From where can I set a user/pass for an application pls?

I've the below application as an API to be used by a client to send requests and would like to set a user/pass for it, I can see the Password tickbox but where can I type in the required password, and can I set a use as well?

Edit: /Csp/Upload*	Server: EC2AMAZ-P16L6KT Namespace: %SYS
