834 X12 file with single ST SE block with multiple members

Hello Developers.

I have a question regarding X12 834 file for Payers.

We have a client thats sending X12 834 file with single ST SE block and has thousands of members in one single block and X12 process is throwing STORE error when processing this file.

Has anyone ran into this issue and has a way of splitting 834 file into single <ST> <SE> block?

Thank you in advance

Sheetal
