## XML Schema Projection - honour-all-schemaLocations

Hi,

I would like to use the XML Schema Wizard / %XML.Utils.SchemaReader to generate the Cache classes.

It seems Xerces has trouble with xs:import. [XSD Source - DMPRheumatoideArthritis.xsd](#)

```
Fehler: FEHLER #5373: Klasse 'DMP.cda.dmpclinicaldocumentheadertyp', von  
'DMP.cda.levelone:property:clinicaldocumentheader' benutzt, existiert nicht  
Abgeschlossen bei 2022-11-05 22:17:18
```

Maybe I can solve this problem by enabling this [feature](#) in Xerces somehow?

<http://apache.org/xml/features/honour-all-schemaLocations>

Is there any other way to work around this problem?

Best regards

Ruiyan Yu
