Adding a class to IRIS namespace 'USER' using terminal

Hi,

I want to know how to add a class to IRIS namespace 'USER' using terminal.

How do I do this?

I know you can add this class using Visual Studio Code with the InterSystems extension installed on my PC and connected to an IRIS instance.

Is it possible to do this with terminal? From this prompt:

BASETC:USER>

I have a class like in this example:

```
Class ObjectScript.RightTriangle
{
    /// Compute area and hypotenuse of a right triangle
    ClassMethod Main()
    {
        write !, "Compute the area and hypotenuse of a right triangle",
            !, "given the lengths of its two sides."
        ....
    }
}
```

[#InterSystems IRIS](#)

Product version: IRIS 2022.1
