## Ens.Alert

Hi Community,

I am working on sending Gmail with error details when any errors occurs in the ensemble production.

I am facing the below issues while doing it

1.I have Ens.Alert (Business process) using the class Ens.Alerting.AlertManager and Emailoperation (Business operation) using the class EnsLib.Email.AlertOperation. here my business process is not sending the Alarm request to business operation eventhough i am using rule to connect the business operation

2.What are SMTP server details needs to given for Gmail?

Please let me know how to resolve these issues

Thanks,  
Smythee
