WSDL SOAP service is creating web sessions leads to server down

Hi Friends,

I have created and exposed a web service for the given WSDL.

daily 500+ requests are processed via this SOAP service in live.

after 2 days live server got stopped with no web sessions available.

We removed this SOAP service, now live is working fine. We are investigating why web sessions got increased.

Could you please give me any clue, as to why web sessions got increased with the unknown user while processing requests through SOAP service?

Thanks,

Prashanth
